Experience

Data Analytics Research Assistant | York Region Educational Services | 11/2025 - Current

- Collected, cleaned, and structured **multi-source volunteer activity datasets**, including attendance records, event participation, interview bookings, and engagement metrics.
- Produced **regional and national reports analyzing volunteer hours logged**, helping leadership understand participation levels and program impact across locations.
- Built analytical reports tracking **weekly and monthly volunteer activity**, cancellations, coaching sessions, attendance trends, and engagement indicators.
- Performed **data validation and cleaning workflows** to resolve inconsistencies across datasets stored in spreadsheets and internal platforms.
- Used **Python (pandas, NumPy), SQL-style joins, and DuckDB queries** to combine datasets from different sources and generate structured analytical tables.
- Created dashboards and visualizations using **Matplotlib, Seaborn, Plotly, and Tableau**, supporting operational decision-making and reporting.

Freelance Data Analyst & Python Developer | Self-employed | 09/2024 - Current

- Designed a modular **data platform** for CaRMS, using **PostgreSQL + SQLAlchemy/SQLModel, Dagster** for orchestration, and **FastAPI** for internal services. Experimented with **LangChain** to prototype AI-assisted workflows around structured data + documents.
- Built a **POS-style fullstack** application for Coffee Island + **analytics layer** to track sales and product performance.
- Implemented **ETL pipelines** (Pandas, NumPy) for cleaning, transforming, and aggregating datasets (5K–50K+ records). Performed EDA & data mining (Pandas, Matplotlib, Seaborn, Plotly); identified trends, outliers, and behavioral patterns
- Participated in a **data analysis** for Compas for Good, focusing on survey/**NLP**-style datasets, where I identified data inconsistencies, missing encodings, and mapping issues, and implemented validation logic for Likert-scale responses, categorical normalization, and text-based inputs as well as contributed to **web-dashboard** creation.
- Developed an **AI-powered decision engine** in **Python** implementing Minimax with Alpha-Beta pruning, custom heuristic evaluation functions, performance optimization and state management. Extended experimentation into feature scoring and ML-based evaluation, strengthening understanding of algorithmic optimization and model behavior.

Data Analyst | Dance Radar | 01/2026 - Current

- Designed and implemented Neo4j Aurora **GraphDB** data models representing relationships between users and data entities, enabling advanced queries such as **similar events recommendations**, shared interests, and **behavioral clustering**.
- Engineered graph **data pipelines** and relationship aggregation **event-driven workflows** with **Inngest**.
- Produced data-driven insights and **engagement statistics dashboard** with Recharts (user interest growth in events, popular teachers/events, relationship networks) used to demonstrate platform traction and growth potential to stakeholders.

- Analyzed drop-off points in user flows and translated findings into UX and product improvements with **user behavior analytics, event tracking, and database-driven dashboards**.
- Implemented backend services using **Node.js, Typescript, and REST APIs**, supporting data processing and application analytics.
- Designed relational and NoSQL database schemas using **PostgreSQL, MongoDB, and Airtable** for structured data storage and analytics.

Education and Training

George Brown College | Toronto | Expected in 05/2026

Some College (No Degree): Computer Programming And Analysis

- High academic performance (**GPA: 3.8**). Five times **Dean's List** of Honor Laureate.
- **Fullstack & software** development + **data science**
- **Team Lead** for 2 years on multiple group projects, coordinating planning & collaboration.

Skills

Data Analysis & Science:

Python (pandas, NumPy, scikit-learn), SQL, exploratory data analysis (EDA), statistical analysis, data cleaning & validation, feature engineering, A/B testing basics, KPI & metrics analysis, data storytelling

Data Engineering & Pipelines:

ETL/ELT workflows, data pipelines (Dagster), PostgreSQL, data modeling (relational & graph), data integration, data quality & transformation, Docker, AWS / Vercel deployments

Visualization & Reporting:

Tableau, Power BI, Plotly, Matplotlib, Seaborn, Excel (Pivot Tables, VLOOKUP), dashboarding & business reporting

Programming & Tools:

Python, JavaScript/TypeScript, React, Streamlit, FastAPI, LangChain, Git
